### GLEAM

Melamine and plastic wares decolourise over time when used in the storage of food or as an eating container. These unsightly stains can only be safely removed by soaking in a fast working chemical. GLEAM is developed for such a purpose. It is safe on hands and on the wares that are to be cleaned.

#### FEATURES

Granular product, longer shelf life, easy to store.

Stain removal formula makes it effective either at room temperature or hot solutions.

Powerful yet safe, will not decolourise items.

#### APPLICATION

Dissolve two spoonfuls in a gallon of hot water. Soak items for 15 minutes. For severe discolourising, a longer soak time may be necessary. Do not brush or scrub as it is unnecessary. Hot solutions i.e. above 40°C will destain much faster than if treatment is carried out in a cold solution.

#### **N.B. :-**

Spent solutions of GLEAM may be used for floor washing.

For more information on GLEAM, consult Protek's representative.
