

TECHNICAL BULLETIN

PROCESS

Process is a liquid acid cleaner. It is a blend of organic and inorganic acid combined with nonionic surface active agents so as to produce excellent cleaning result. The product is suitable for all food processing industries.

Process is specially designed to meet modern cleaning method – CIP system or soak and brush on methods.

The formulation of Process ensures fast removal of milkstone in dairy plant. It is also effective against Protein contaminants commonly found in the brewing industry.

Process is non-corrosive to stainless steel, copper and glass-lined surfaces.

Process can be used:-

- For plate type heat exchangers or coolers.
- For removal of milkstone, beerstone as well as eggstone.
- For pasteurisers and vacuum pans.

Properties

- Clear amber liquid.
- Low foaming.
- Good rinsability
- Quick penetration.
- Fast wetting.

Dosage

- 0.5% to 3% depending on soil condition and method of application.

Specification

Phosphoric Acid based detergent.
