

TECHNICAL BULLETIN

SO-DRI

Technological advances over the past decade were rampant and exciting. Dishwashing machines also benefited from these advances. To-day, we see low temperature machines, high volume, low volume water powered systems, high pressure, low pressure and even the latest advances - ultrasonic dishwashing machines. **SO-DRI** is a product which is specially formulated to complement the cleaning demands imposed by the specifications set by the machine manufacturers.

FEATURES

- Powerful synthetic surface active compounds which cuts surface tension effects of water at low temperature allowing for fast drying effect.
- Effective in hard or soft water, reducing incidents of fogging due to deposition of solids.
- Non corrosive to machine or hands.
- Safe, non toxic, biodegradable surfactant material.

APPLICATIONS

SO-DRI is economically dispensed through a dispenser.
